

Short CV: Kenneth Murphy

Ken grew up in Kansas, graduated from Rice University in Houston, attended Medical School at Johns Hopkins in Baltimore, getting an MD and PhD (under Solomon Snyder), did Anatomic Pathology training at Washington University School of Medicine in St. Louis and a postdoctoral fellowship with Dennis Loh. He began his own lab in 1990 working on T cell differentiation in the Department of Pathology. Current interests of the lab are how dendritic cells develop and diverge into various functionally distinct subsets and how they control the magnitude and quality of T cells responses.
